OBJECTIVE

Computer Science graduate with over 2 years of professional experience, applying Machine Learning and Generative AI to improve and evaluate AI model outputs, LLM benchmarking, and reasoning trajectory analysis. Hands on experience with deep learning frameworks including TensorFlow and PyTorch. Strong foundation in Python, data structures & algorithms, and software engineering best practices, with a proven track record of independent, high judgment decision making and leading and mentoring cross functional teams. On the development side, experienced in building and deploying full stack applications with FastAPI, PostgreSQL, SQLAlchemy ORM, REST APIs, and React.

EXPERIENCE

Data Analyst at Turing 2024 – 2026

Remote, India

- Evaluated AI-generated code outputs, reasoning traces, tool usage, and multi-step agent trajectories across annotation and reasoning-benchmarking projects, assessing instruction-following and factual accuracy, and whether fixes resolved root causes or relied on workarounds.
- Exercised independent judgment to design 130+ evaluation tasks with minimal supervision, applying software engineering best practices to standardize guidelines and ensure accurate, reliable, reproducible results.
- Led a team of 5, delivering precise, evidence-based written annotations referencing specific code, commands, and agent actions, and collaborating cross-functionally with engineers and stakeholders to document processes and drive fixes to defective tasks.
- Performed prompt testing, root-cause analysis, and debugging of model outputs, documenting recurring quality issues and defect patterns to improve AI system performance.
- Maintained clear technical documentation, including data mappings, process logic, guidelines, and operational notes to support reproducibility and knowledge-sharing.
- Developed Python scripts and SQL queries to automate evaluation workflows, validate large-scale datasets, and build data pipelines/tooling handling structured JSON/JSONL outputs, applying software design principles for consistency and maintainability.

PROJECTS

TimeGrid - Event Scheduling & Conflict Detection Engine • *Python* • *FastAPI* • *React* • *PostgreSQL*

- Built a full-stack event scheduling application (React frontend, FastAPI backend) with REST APIs for user authentication, event management, and participant invitations; deployed end-to-end (Render + GitHub Pages) with live interactive Swagger documentation.
- Designed a group-availability algorithm that merges overlapping busy intervals and computes shared free-time windows in $O(n \log n)$, using interval scheduling and conflict detection to prevent double-booking across users' calendars.
- Implemented JWT-based authentication and access control, bcrypt password hashing, and request-validated, conflict-checked event creation using PostgreSQL and SQLAlchemy ORM.
- Validated boundary and overlapping-interval edge cases through targeted test cases to catch logic regressions before deployment, following software engineering best practices for maintainable, well-documented code.

GroIt - Retail Object Detection on Edge • *Python* • *SQL* • *PyTorch* • *MobileNetV2*

- Built an end to end ETL pipeline in Python and SQL to extract, clean, validate, and load a custom 1,000 image retail dataset, ensuring data quality and consistency before model training, in a team of 4.
- Designed and trained a MobileNetV2 based convolutional neural network for image processing and object detection, independently analyzing accuracy and loss metrics to iteratively tune architecture and hyperparameters.
- Achieved 86.7% classification accuracy while minimizing compute footprint, running unit tests and benchmark comparisons on pipeline outputs and model predictions to catch data quality and performance regressions early.
- Documented data mappings, preprocessing logic, and model evaluation results for reproducibility, and optimized inference code for deployment on resource constrained edge and mobile devices.

EDUCATION

KIIT University, Bhubaneswar *B.Tech, Computer Science & Engineering, 2020–2024*
CGPA: **8.56/10**

Kendriya Vidyalaya, Berhampur *Class 12*
Percentage: **80.2**

Kendriya Vidyalaya, Berhampur *Class 10*
Percentage: **76.4**

SKILLS

Programming Languages	Python, C, C++, JAVA, SQL
AI/ML & Deep Learning	Machine Learning, Deep Learning, TensorFlow, PyTorch, Convolutional Neural Networks, Image Processing, MobileNetV2, Model Training & Evaluation, Feature Engineering, Generative AI Fundamentals
LLM & Agentic AI	LLM Evaluation, RAG, Prompt Engineering, LangChain, LangGraph
Backend & APIs	FastAPI, REST APIs, SQLAlchemy ORM, JWT Authentication, bcrypt, Swagger/OpenAPI
Data Engineering	ETL Pipelines, Data Cleaning & Preprocessing, Dataset Curation, JSON/JSONL Data Handling, Quality Assurance
Databases & Cloud	PostgreSQL, MySQL, AWS Cloud Fundamentals, Deployment
DevOps & Tools	Docker, GitHub Actions (CI/CD), Git, Pytest, Unit & Regression Testing
Software Engineering	Data Structures & Algorithms, Software Design Principles, Code Review, Root Cause Analysis, Debugging, SDLC, Version Control, Agile, Scrum
Productivity Tools	MS Office (Word, Excel, PowerPoint)
Languages	English, Hindi, Odia

ACHIEVEMENTS AND CERTIFICATIONS

Delivery Excellence Award — **Turing**, Q1 2026
Society Lead — Kraftovity, KIIT
AWS — AWS Academy Cloud Foundations
SkillArbitrage — Data Science and Artificial Intelligence
